

NEW TECHNOLOGY

TEST AND PINPOINT THE PRECISE LOCATION OF ALL HIGH PRESSURE AIR LEAKS

AIR BRAKE NANOLEAK TESTER™

RDL 95-0121

The Air Brake NanoLeak Tester quickly tests and precisely diagnoses high pressure Air Brake, Air Suspension, and Air Powered Accessory System Leaks with 100% reliability

US Department of Transportation Standards

Of 100 vehicles tested,
64% of Tractors have leaks –
with 42% having leaks that
fail US DOT Standards

Of 100 vehicles tested,
76% of Trailers have leaks –
with 39% having leaks that
fail US DOT Standards

What can the Redline Air Brake NanoLeak Tester do for you?

Test: With a simple, 1-minute test cycle, the Redline Air Brake NanoLeak Tester will flash a clear green / red, pass/fail light indicator for fool proof testing, regardless of technician and truck variables

Find: Precisely identify all leak locations fast

Accuracy: Only the Redline Air Brake NanoLeak Tester can tell you with 100% certainty whether a vehicle, tractor or trailer meets US DOT Standards or risks being taken out of service

Simplicity: Engineered with safety in mind, even a relatively inexperienced technician can reliably test every vehicle, quickly pinpointing the site of the problem with 100% certainty, freeing more experienced technicians to make repairs

The compact design and full compliment of specially engineered accessories make Redline Air Brake NanoLeak Tester an ideal fit for HD service centers performing air brake leak testing

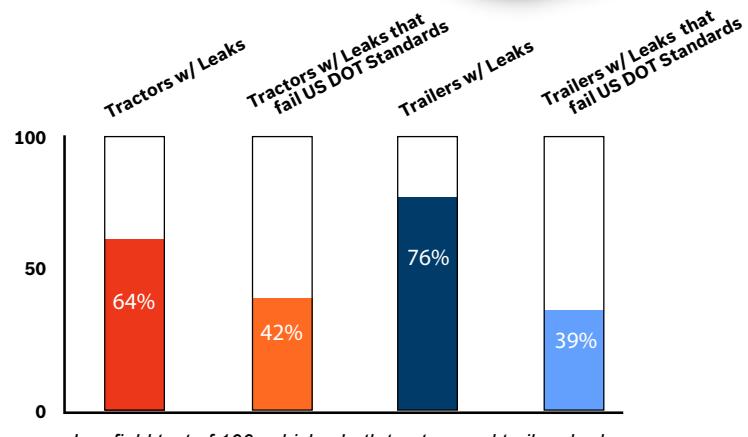

Time Saved: Conventional Method vs Air Brake Leak Tester

Average time to find a leak using conventional methods:
42 minutes

Average time to find a leak using Air Brake NanoLeak Tester:
5 minutes

In a field test of 100 vehicles both tractors and trailers had leaks that would fail DOT standards

Features

- The Air Brake NanoLeak Tester quickly tests and precisely diagnoses high pressure Air Brake, Air Suspension, and Air Powered System Leaks with 100% reliability
- Utilizes adjustable test pressure up to 9.3 BAR (up to 135 PSI)
- Compact and rugged design is built of professional grade steel and billet aluminum
- Runs on compressed air and 12V DC
- Weights only 8.16 Kg (18 lbs)

NEW TECHNOLOGY

TEST AND PINPOINT THE PRECISE LOCATION
OF ALL HIGH PRESSURE AIR LEAKS

AIR BRAKE NANOLEAK TESTER™

RDL 95-0121

Redline Detection, the industry leader in heavy duty diagnostic leak detection equipment, today unveiled the Air Brake NanoLeak Finder™, a technological innovation that quickly pinpoints leaks in Air Brake, Air Suspension and Air Powered Accessory Systems.

"The Air Brake NanoLeak Finder™ allows technicians, for the first time ever, to test for air brake leaks and pinpoint the precise location of leaks, in minutes. The equipment is being used by OEMs to locate leaks in heavy duty trucks and equipment that would take hours with conventional methods, saving valuable service time and getting trucks back on the road fast" said Alex Parker, Executive Vice President of Redline Detection "this is a very exciting breakthrough for anyone who deals with air brake leaks."

The patent pending technology in the machine creates a signature vapor that, in conjunction with the hand-held NanoLeak™ Locator, pinpoints the precise location of air brake leaks instantly. Clear, audible and visual signals speed diagnostics and pinpointing of leaks. The equipment improves efficiency, saving valuable hours and marking a dramatic technical advance from conventional, messy, soapy water methods and ineffective listening devices.

"Our technicians spent over 16 labor hours attempting to find air brake leaks on two fire trucks. We could not find the leaks until we used the Air Brake NanoLeak Finder™. Using this equipment, we found and fixed all the leaks on both fire trucks in only 1.7 hours. This breakthrough technology will become the 'best practice' procedure for air brake diagnostics and repair" said Chris Michael of Valley Power Systems who field tested the new technology.

With a simple, 1-minute test cycle, the Redline Air Brake NanoLeak Finder™ will flash a clear green or red, pass or fail light indicator for fool-proof testing, regardless of technician, truck, or trailer variables. Only the Redline Air Brake NanoLeak Finder™ can indicate, with 100% certainty, whether a vehicle, tractor or trailer meets US DOT Standards or risks being taken out of service. Engineered with safety in mind, even a relatively inexperienced technician can quickly and reliably test every vehicle, easily pinpointing the site of the problem with 100% certainty, freeing more experienced technicians to make repairs.

The compact design and full complement of specially engineered accessories make Redline Air Brake NanoLeak™ Tester essential for HD service centers performing air brake leak testing. The durable, professional grade equipment comes complete with all necessary accessories, ready to go to work right out of the box. Weighing only 18 pounds, the Redline Air Brake NanoLeak Finder™ runs on compressed air and 12V DC, and utilizes test pressure up to 135 PSI (9.3 BAR).
